PROJECT OVERVIEW

We propose the development of a comprehensive e-learning website that will provide a platform for educators and learners to engage in online education. This website aims to offer a wide range of courses, facilitate interactive learning experiences, and support both individual learners and institutions. The primary goal is to create an accessible and user-friendly e-learning environment. More importantly, it contains free courses. It is very helpful for all students who are studying.

PROJECT OBJECTIVES

User-Friendly Interface: Create an intuitive and visually appealing website that is easy for customers to navigate and use.

Search and Filter Functionality: Create a powerful search engine and filtering options to help customers find products quickly and easily.

Responsive Design: Ensure the website is responsive and works seamlessly on various devices, including desktops, tablets, and mobile phones.

Review and Rating System: Enable customers to leave reviews and ratings for products, contributing to trust and transparency.

Admin Panel: Develop an admin panel with analytics and reporting tools for site administrators to manage users, products, orders, and gain insights into site performance.

Security and Privacy: Ensure the security to protect user data and transactions, complying with industry standards and regulations.

TOOLS AND TECHNOLOGIES

- Web development tools
(HTML, CSS, JavaScript, PHP)
- Database (SQL Server)
- Hosting

CONCLUSION

We are expecting to grant free courses and a good educational environment for users via this web page.

THANK YOU !
